

Year 10 and 11 essay competition

Life Without Plastic

Plastic is a huge part of modern life and yet it is mainly derived from non renewable sources and the environmental impacts are well known. Our reliance on it as a commodity means that we need to find new and innovative alternatives to plastic or new, sustainable ways of making it.

We want to know what engineering or technological advance could provide the solution. Choose one technology that you think could really make a difference and tell us about it in your own words. Original ideas are encouraged and remember to think about new ways of making plastic, not just alternatives!

Essays should be a maximum of 500 words and a £100 Amazon voucher will be awarded to the best essay (in the opinion of the judges). **Closing date for entries is 31st May 2018, Please e mail entries to rachel.davies@woodplc.com or amy.parsons@woodplc.com**
